## SOUND THAT MAKES YOU MELT

Some people subscribe to the principle "that sound is meant to be heard and not seen". Naturally those same people see no reason why inconspicuous speakers should suffer poor sound quality. We agree! That's why we made sure that even the most golden of ears would be satisfied with the sound of our SS-10's despite their minute size..

These speakers are small, versatile and packed full of features. The ease of installation is unparalleled. Each speaker comes with a key hole incorporated into the sliding bracket/stand plus a single standard 6mm threaded hole on the back. It even has a badge that rotates in any direction along with two stage magnetic shielding. With all these facilities the SS-10's are mountable on any type of surface or wall in any direction. Further more if you purchase our inexpensive SWB wall brackets your mounting options become endless.

The cabinets are constructed of non resonant plastic with chamfered lip joints between the two enclosure halves, thereby eliminating wind noise and cabinet vibration. A Mylar cone material is used in the tweeters for smooth detailed high frequencies. The woofer has a large magnet driving a smooth light weight cone producing solid bass, dynamic mid range and low distortion. Hidden inside the speaker cabinet is a crossover comprising a high quality inductor as well as capacitors, so even that which is hidden is state of the art.

As you would expect, the SS-10 is designed to integrate perfectly with our SUB-40 or SUB-120. All you need to do is put them together and reward yourself with glorious invisible Micromax sound.

## SPECIFICATIONS

Frequency Range	100Hz - 20kHz ( ± 3db)
Recommended Amplifier Power	10 - 60W per channel undistorted
Sensitivity ref 2.83V, 1M	88db
Nominal impedance	6 ohms
Cross-over frequency	6 kHz
Tweeter	13mm Dome
Woofer / Midrange	80mm Fine fibre pulp cone
Dimensions	155mmH x 100mmW x 85mmD
Enclosure Finish	Silver
Weight	0.75kg each

# SS-10
